

IRON^{lvc}

New registered with very high yield potential.

Benefits

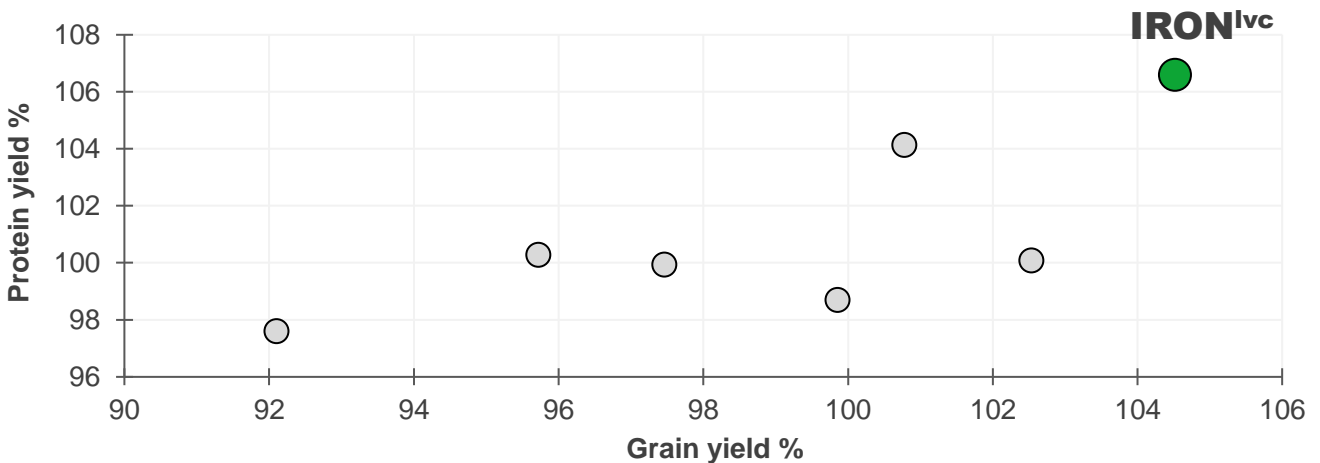

- ✓ High yield potential allows for high to very high protein yields.
- ✓ Good shattering resistance, low-loss harvest.
- ✓ Good resistance to Botrytis and rust.
- ✓ Certified-seed expected to be available for sowing 2025.

Classification based on German Federal Plant Variety Office 2023 and own observations.

IRON^{lvc} – Powerful growth for difficult growing conditions.

IRON^{lvc} convinces with its good plant health and standability, which ensures grain and protein yield even under difficult conditions.

Source: Germany, BSA. NL-trials Ø 2021 – 2023; Only 3-years tested varieties presented; Checks = FANFARE, MACHO
Grain yield: 33 locations, rel. 100 % = 45,8 dt/ha ; Protein yield: 29 locations, rel. 100 % = 11,3 dt/ha
